

CO₂-Footprinting

Soil & More International developed a CO₂-assessment software which allows to calculate CO₂-footprints of organizations and products much faster and offers to map complex supply-chains. The base package is a self-assessment based solution including an executive summary report. Additional modules are available such as emission reduction and adaptation scenario modeling, benchmarking, comprehensive reporting and scalable integration into existing auditing environments.

Climate-Workshop

In order to familiarize yourself and your staff with the topic of CO₂-footprinting, climate change and especially its impact on agriculture in general, Soil & More offers an informational 1-Day training workshop at your facilities including the calculation of your companies or organizations CO₂-footprint.

Water-Footprinting

Soil & More International offers to calculate the water footprint of your company, organization or product according to the latest standards of the "Water Footprint Network" (WFN).

Compost-Workshops and Supplier Training

Soil & More International offers to train your or your supplier's key personnel on how to best manage the farm biomass through mechanically aerated or static composting and how to produce your own microbial compost starter and "Compost Tea" to be used as easy to apply liquid fertilizer and pest and disease control agent. Optionally Soil & More international trains your suppliers on how to calculate their farm and product CO₂ and water footprint or assess their emission reduction and carbon credit potential.
